Rode and Crotty

Lab 6 Reflection

Design Inspiration

For this portion of the lab, I used an image by RLN Studios called "Giverny Morning Hues". It is a beautiful landscape painting that has beautiful colors that I thought would work very well with my interactive map. It worked well that I could base the colors of the land and water off the colors in the painting to still look natural. I used some of the brighter colors in the painting for the streets, labels, and location markers.

Cartographic Challenges

One of the main challenges I faced when making my map was ensuring that it didn't look too busy. I do think that some of the markers can look busy when you zoom in, but I think I did a good job of choosing fonts and colors to make them stand out. I chose to keep most of the features in my map because it seemed the most realistic and informative.

Technical Challenges

I faced a lot of technical challenges when creating my map and implementing it through python. I had to reset my computer multiple times because when I would run python, nothing would happen. I had to look to AI to help and sent screenshots of what was going wrong to help me fix it. Although I used AI for this lab, I made sure to thoroughly understand each step to the point where I could explain it to a classmate or peer. Although AI was helpful, it added a lot of

extra parts and .py files to my project that I probably did not need, but understand why they exist due to my problems with VSC.
